Senior Embedded Systems Engineer | Bluetooth and Wi-Fi Audio Platforms | C | C++ | Multi-processor architecture | automated testing

Senior Embedded Systems Engineer is required to join a Global and Market Leading wireless and telecommunications organisation. You will be responsible for developing complex software solutions for a new range of Audio Platforms. This software will utilise the organisations current and future range of Bluetooth and Wi-Fi audio systems.

Proven experience and ownership of complex and time sensitive embedded software engineering projects is imperative for this role. You will be involved in hands on development initiatives in C from the start and will also be expected to play a significant role in developing automated test units. Given the seniority of this role you will also be expected to perform project time estimations and mentoring duties.

Key skills

- Advanced understanding of embedded software design techniques
- Familiarity with automated C / C++ testing. Unity, CPPUnit or CUnit
- Advanced understanding of software Architecture
- Debugging techniques
- Configuration Management
- Familiarity in dealing with hardware designs and signalling

Desirable Experience

- Multi-processor architectures
- Wireless communication protocols
- iOS, Android or Windows development experience
- Knowledge of DSP, wireless or audio technology
- Assembly knowledge

If you feel you have the correct skills and attitude to fulfil this role then please apply accordingly.

Summary: Electronics, electrical, mains to 3 phase, power supply development, systems expertise and knowledge, next generation industrial power and monitoring solutions, North Cambs, to £competitive + benefits.

Established just over 50 years ago this family firm is highly regarded across the globe as a design and manufacturer of industrial based 3 phase circuit breakers and power monitoring products. This key role is to be based in their small Ely office and will be the hardware lynch pin in evolving the next generation of both customer requested improvements to existing products and furthering the capability of the next generation of products. As the Senior Hardware Systems Engineer becomes more established you will be expected to generate new ideas to keep the company's products fresh and up to date to lead the way in this competitive sector. Product improvements could include the design of new remote monitoring systems, next generation power supplies, near field communication products and so forth to meet market needs. You will be maximising opportunities using a range of skills such as microprocessor based design, analogue & digital design, SMPS design and systems design.

The Senior Hardware Systems Engineer will have a good degree from a reputable university and have solid commercial electronics experience with analogue, digital, power supplies design experience with a background in the mains to 3 phase domain with systems engineering experince in a commercial setting and a good understanding of electrical areas including 3 phase systems, protection devices and so on. You will have excellent personal communication skills to work with clients worldwide and outside associates.

This is an excellent opportunity to develop new ideas and further evolve the company's products.

Keywords: Analogue, digital, SMPS, power supply, systems, electric, electronics, electrical, mains, 3 phase, North Cambs.

Another top job from ECM, the high-tech recruitment experts.

Even if this job's not quite right, do contact us now - we may well have the ideal job for you. To discuss your requirements call 01223 813399 or email your CV. We will always ask before forwarding your CV.

Please apply (quoting ref: CW23005) only if you are eligible to live and work in the UK. By submitting your details you certify that the information you provide is accurate.

### Senior Embedded System Engineer (C++ , C#)

#### Newport , Gloucester, Bristol

#### **SC CLEARANCE REQUIRED/NEEDED**

Are you an experienced C# or C++ Developer? Have experience in working with Embedded Software? Do you want to work for a market leading organisation working on state of the art projects? Do you want the potential for career development? Then look no further, the opportunity of a life time is here!

My client is currently exploring the market for experienced **Senior Embedded System Engineers with exceptional experience in C++ or C#**. Within this position the successful candidate will be responsible to the Head of Equipment & Products for executing allocated Software Work Packages within agreed cost, time and quality constraints. The successful Senior Embedded System Engineer will be responsible for demonstrating that the developed product meets all specified customer requirements

#### Essential Experience:

- Implementation of embedded real-time software in either C or C++ or implementation of Windows application software in C#
- Must have extensive experience of software development and be familiar with a number of software development methodologies
- Able to carry out development tasks of up to six months duration with very limited supervision
- Must have experience of software systems design & implementation for networking communications in a commercial and/or military environment.
- Must be familiar with process driven software development
- Object oriented analysis, design and development documented using UML
- Must have an understanding of requirements implementation and traceability, and of work package definition and estimation
- Must have successful track record of working in a lead role
- Must be highly self-motivated, articulate, with good verbal and written communications skills
- Experience of Requirements Management (e.g. using DOORS)
- Experience of full project lifecycle

#### Educational Attainment:

- The successful candidate will be Educated to Degree Level (or equivalent) in Software engineering.

For the opportunity to work within a market leading organisation and progress your career to the next level then look no further, get in touch with me today!!

### Senior System Engineer - Portsmouth - IT Services Consultancy

35,000K - 40,000K base + 25 days holiday, Pension, life insurance, health insurance.

Excellent opportunity for a Senior System Engineer to join a dynamic IT Infrastructure Technology Services organisation/consultancy who supply high calibre resources to a variety of blue chip clients (Financial Services/Insurance/Banking/Telecoms).

This role is for a senior system engineer within managed services performing remote build services of physical & virtual servers with the additions of extra server resources and software as required by the customers. All builds should be built to defined SLAs based on standard operating procedures, each build requires multiple validation processes to be documented and approved to ensure identical builds are performed to the high level standard demanded.

The role of the Senior System Engineer also includes the responsibility of managing the other system engineers, ensuring build demands are met, liaising with the customers, maintaining reports and work flows of the entire build services we offer. Also ensure quality of delivery to clients to ensure client satisfaction, and best position the company for additional business and work with the account manager to ensure opportunities and issues are handled effectively.

#### Key Responsibilities for the Senior System Engineer:

- Build physical and virtual servers to predefined OS levels (AIX, Linux, Windows)
- Add extra software, resources to each build as required by each build request
- Follow validation processes to ensure builds all built to correct spec within SLA timelines
- Run calls & meetings as required to liaise with customer on build progress
- Manage system engineers, allocate build demands to ensure optimal turnaround of requests
- Ensure build requests are managed end to end from initial request through to completion and handover
- Create and maintain reports showing build demand, requests and billing quantities
- Maintain and create as required all build technical processes and SOP documents
- Mentor peers and junior staff in the organization where needed
- Identify opportunities for extending business opportunities

#### Experience required for the Senior System Engineer:

- Minimum of 5 years IT background and experience
- Minimum of 2 years experience managing a technical team and demand throughputs

Senior Systems Engineer

Up to £34,000 pa (DOE)

Permanent

South Wales

2nd/ 3rd line support, Cisco Switching & Routing, DBA (MySQL), Linux (Redhat/ Centos. Debian/ Ubuntu), VoIP, Network Monitoring Tools (Wireshark)

IntaPeople are seeking a Senior Systems Engineer to join an existing team of technical engineers based in South Wales. Reporting directly to the Service Desk Manager, you will be responsible for assisting in maintenance of all company platforms available to customers as well as getting involved in project work including research and development into new technologies in order to enhance company performance. The right candidate will be network focused (Cisco) but also have skills with Windows and Linux Servers as well as database administration. You will be proactive in seeking out new ideas and have excellent team working skills. You will also be required to take part in a 24/7 on call rota and have access to your own vehicle for client visits. In reward you will be offered with a friendly, but dynamic working environment as well as career progressive and training opportunities.

### Skills Required:

- Cisco Routing and Switching
- Database Administration (MySQL/ equivalent)
- Linux (Redhat/ Centos, Debian/ Ubuntu)
- TCP/IP networking
- VoIP
- Network Monitoring Tools (Wireshark)

### Skills Desired:

- MPLS
- Programming skills (Java, Python)
- SonicWall Firewall
- Brocade Routing & Switching
- Oracle

If you feel your skills match this criterion then please do not hesitate to get in touch. Please apply for the role or call Fiona Hosking on 02920 252500 for more information. This role is commutable from Bridgend, Merthyr, Cardiff and Newport. We look forward to hearing from you! **Systems Administrator / Senior Systems Engineer - City of London - Windows, Server, Active Directory, Exchange, VMware, SAN, Linux, Powershell - £70,000**

A leading financial services organisation based in the city is currently looking to hire a talented Systems Administrator / Senior Systems Engineer (Windows, Server, Active Directory, Exchange, VMware, SAN, Linux, Powershell) to join their already established team. My client is looking for someone who is able to prioritise and can effectively communicate complex issues to non-technical team members.

Day-to-day responsibilities of the Systems Administrator / Senior Systems Engineer (Windows, Server, Active Directory, Exchange, VMware, SAN, Linux, Powershell) will include: management of technology infrastructure projects; monitoring, maintenance and support of global mission critical architecture and installation and configuration of systems including servers, storage, VMware, operating systems etc.

To be considered for the Systems Administrator / Senior Systems Engineer role you will require the following skill-set:

- Windows
- Server 2008r2 / 2012
- Exchange 2010 / 2013
- Active Directory
- VMware
- Linux
- Scripting - Powershell / VB / Javascript

This is a fantastic opportunity to work for a leading financial services organisation. If you are looking for a new role working in a fast-paced and challenging environment, where you will get exposure to cutting edge technologies and get involved in on-going project work then please apply now. For immediate enquiries please contact Harriet Lamplugh de Smith at Harrington Starr on 0203 587 7007 /

**Senior Systems Engineer - Linux** at/spectrum-  
**Hampshire; Southampton, Winchester area**  
**£40,000-55,000**

A great opportunity for an experienced Linux Systems Engineer to join an established IT business in leading the design and implementation of a company's IT systems and platform. The role will work at a senior level and report to the Directors.

The role would best suit candidates who are passionate about their job and enjoy being involved in all aspects of a company's Systems and Network building jobs things from the ground up and can demonstrate a depth of knowledge in Systems and Network Architecture.

The Senior Systems Engineer will provide technical and business expertise, commercial analysis and high-level design across Hardware/Software systems and Network Architecture in a fast paced, dynamic working environment.

You will support, enhance and provide technical leadership on the current hardware and software technologies and actively provide leadership in developing ICD's, SDK's for existing and future embedded hardware.

Required experience:

- Must be in a similar role currently, able to demonstrate extensive Linux Systems experience
- Experience of maintaining a resistant and secure platform across a high traffic environment.
- Experience of working in a virtual environment
- Experience of Cisco Networking, Routers, Switches
- Agile/SCRUM understanding
- Degree qualified or qualification in an appropriate technical discipline.

Desirable:

- Cassandra, Hadoop, Nginx or KairosDB
- PHP programming
- Aerospike
- Cisco Certified Internet Expert (CCIE) certified

The company recognise high performers and offer excellent career progression. The full details are available at

- Are you an enthusiastic and passionate Linux/Windows Systems Engineer?
- Do you have technical expertise of Web and Linux/Windows and enjoy automation?
- Do you have a passion for collaboration; working with Developers and Technical Architects?

If so, then the Totaljobs Group want to speak to you!

You will be responsible for providing 3rd line support and delivering project-based enhancements to our core infrastructure and operations management technology for the Totaljobs Group sites.

As well as that, the Systems Engineer will be involved in a wide range of activities, including ensuring the availability, capacity, security and manageability of the infrastructure. Designing, implementing and co-ordinating enhancement projects to the core infrastructure and managing 3rd party resources to achieve strategic objectives and rapidly changing and dynamic requirements in a challenging and high pressure environment.

### What you'll be doing:

- Provision of 3rd level support for critical site incidents
- Design and implementation of project-based enhancements
- Monitoring the capacity and performance of the core server infrastructure
- Evaluation and selection of suitable products to meet strategic goals
- Documentation
- Mentoring and skills transfer

### What we need from you:

- Linux
- AWS – Cloud/Web Technologies
- Windows 2003/2008/2012/R2
- VMware / Virtual Server
- Chef, Puppet, Jenkins or Docker
- IIS v6 / v7
- Scripting – VBScript or PowerShell
- GitHub
- .Net knowledge

### Desirable Qualities:

- Strong communication skills; with the ability to convey complex technical concepts clearly and concisely.
  - The ability to lead others, balancing directive, coaching and facilitative leadership styles.
  - An agile evangelist; committed to continuously delivering value and to try new approaches in small iterative steps.

### About us;

Established since 1999, the Totaljobs Group is the UK's largest & fastest growing online recruitment advertising business. We're owned by the StepStone Group, an internationally successful job board business that operates in over 22 countries.

We have 450 employees across the UK and a **fast paced, exciting, innovative culture**.

As employers we value **talent, integrity, innovation and results** whilst respecting our employee's work-life balance, freedom and appetite for challenge and recognition, **which is why we have been voted one of the top companies to work for in the UK, 8 years running!**

**Totaljobs Group Generous Benefits Package includes:**

- 35 hour working week; Monday to Friday 9am – 5pm
- 29 Days Holiday plus bank holidays
- Group Pension Scheme
- Life Cover x 4 basic annual salary
- 2 paid charity days per year
- Employee Assistance Programme
- Cycle to Work Scheme
- Free Eye Tests
- Season Ticket Loan (after probation)
- Childcare Allowance (after probation)
- Up to 6 free Physio Sessions (after probation)
- Excellent Maternity & Paternity Pay/Leave

Please ensure your eligibility to work in the UK before applying.

**APPLY (/JOB/66272193/APPLY?S=HEADER&SP=%2FJOBSEARCH%2FRESULTS.ASPX&KEYWORDS=SENIOR+SYSTEM+ENGINEER&RADIUS=10&\_=1470840013845&JOBID=66272193)**

IT Senior Systems Support Engineer / Specialist (x2) required for temp to perm opportunity based near Slough, Berkshire. at/networkers/jo

Working for a large, well-established Public Sector organisation, we have the opportunity for two permanent positions of a Technical System Specialist. You have the option of working directly on a permanent basis with the client, or starting on a contract basis with the view to becoming a permanent member of staff within 3 months.

Main responsibilities and duties:

- \*To provide expert-level support and maintenance of the system infrastructure and services for the Trust on the main campus and all offsite locations.
- \*In addition, the provision of support and advice to other IT staff, Trust managers and end-users on the use and management of IT System and servers hardware and software.
- \*Undertake new IT Infrastructure projects which may be high complex with multiple dependencies. Where require lead on planning, implementation and commissioning of new systems and services.
- \*Taking day to day responsibility for the provision of system support, and to take a key role in deployments and troubleshooting.
- \*Performing detailed system monitoring and produce performance reports
- \*Assist in planning and implementing complex and high value IT Infrastructure projects
- \*Providing support to service calls and requests from the Trusts' IT Service Desk.

For this role you need to have previous experience of working within a Senior Technical Systems / Lead Engineer position with experience within the following technologies: MS Windows Server 2003/8/12, MS Exchange Server 2003/10, MS SQL Server, Citrix, VMware, Desktop Virtualisation, SAN, NAS.

This role is to start ASAP on a contract basis on a rate of £20.00 ltd/umbrella per hour. If permanent application - the salary expectations will be between £29k - £31k + benefits / pension depending on your level of experience.

Senior System Integration Engineer –  
Metrology Systems  
Stockport, Greater Manchester  
c£51,000

Our client is a provider of integrated energy management solutions. As a world-leading company, they are currently expanding, and are now looking for a Senior System Integration Engineer to join their team.

If you have systems engineering design and validation experience, this is a fantastic opportunity to develop a challenging, yet highly rewarding career, with an internationally successful business.

In this important role, you'll have the chance to help provide technical direction to the business and make your mark on our client's future designs.

As the Senior System Integration Engineer, you'll be responsible for defining, designing and implementing the system designs for our client's range of smart meters.

Overseeing a team of innovative Mechanical, Electronic and Software Engineers, you'll implement product design and technology investigations to support R&D initiatives.

Researching and documenting metrology systems, you'll define design validation test plans and test your designs to ensure that products meet specifications and metrology regulations.

Analysing validation results, you'll identify any anomalies and determine their root

cause. Additionally, you'll liaise with Project and Product Managers to plan project timelines and budgets.

To be considered, you must have:

- Previous experience gained within a systems engineering design and validation environment
- A proven track record of leading engineers in cross-disciplinary teams
- Experience of the design and validation of high volume products
- A track record of working and testing against global product standards such as IEC, EN and MID
- Experience of design for EMC, Design for Test and design for high volume manufacture
- A BSc or BEng (or equivalent) in a technical discipline such as mathematics, physics or engineering

As the Senior System Integration Engineer, you must be inquisitive with excellent problem-solving abilities. Analytical and focused, you must also have a collaborative approach and superb communication skills.

To apply for the role of Senior System Integration Engineer (Metrology Systems), please apply via the button shown.

This vacancy is being advertised by Web Recruit Ltd. The services advertised by Web Recruit Ltd are those of an Employment Agency.

Additional Keywords: Senior System Integration Engineer, Lead Systems Integration Engineer, Lead System Design Engineer, Senior Design & Validation Engineer, Lead Design Test Engineer, Lead Systems Test Engineer, Senior Product Designer, Engineer, Engineering.

## Senior External Engineer / Systems Engineer

### About the Job

#### Senior External Engineer/Systems Engineer

Well established and growing IT services company is recruiting a senior external engineer to work with clients on site installing, testing and maintaining IT systems and networks.

As a Senior External Engineer your role will include onsite installation of networks and systems with close liaison with customers so excellent interpersonal and communication skills are essential. You will have the ability to analyse and interpret customers requirements and translate these into working solutions, with a good all round knowledge of IT rather than specialism

As a senior external engineer your technical knowledge should include:

- VMWare
- Citrix
- Cisco
- VDI
- IP Telephony
- Experience of using remote diagnostic skills to help customers with a wide variety of IT issues and related problems
- An understanding of networks and a patient problem solving approach is essential.
- Windows 2003/2008/2012 server
- Desktop support
- Microsoft Exchange
- Watchguard Firewalls / ADSL routers

On offer is a basic c35k-45k and car or car allowance, and also good training and future opportunity.

## Senior Rail Systems Engineer

### About the Job

#### Senior Rail Systems Engineer

#### West Midlands

#### Why Arup?

Arup is a firm of designers, planners, engineers, consultants and technical specialists offering a broad range of professional services globally.

We are different to most other consultants. As we are employee-owned, we are not bound by shareholder or other external pressures, which allows us to be selective about the work we pursue, seeking out projects that will push, develop and engage our staff, and shape a better world.

#### Arup, Rail:

We are a key player in the Rail market and are currently engaged in significant projects across the UK and overseas. As part of a network of 14 UK offices and a Rail Business involved in projects such as HS1, HS2, Crossrail, Kings Cross Station and Ipswich Chord, our current projects include a feasibility study for Clapham Junction - one of the busiest transport hubs in Europe, Leicester Station Capacity improvements for Carillion, Water Orton corridor AiP designs for Network Rail's HS2 Enabling Works, the London to West Midlands Hybrid Bill for HS2, Metropolitan Line Extension detailed design for LUL and Vinci, Rail Engineering Technical Adviser roles on High Speed and Freight Lines worldwide, Calder Valley GRIP 5 Signalling and the Ferriby to Gilberdyke Resignalling project.

#### The Role:

As a member of the Rail Systems Team, you will provide support and advice to teams across Arup on all rail system and system engineering issues. This can range from requirements management and assurance through detailed system design and system modelling to hazard analysis, EMC and dependability.

#### Day to day role of will include:

- Training and supporting designers from other disciplines to successfully apply systems engineering techniques to rail projects
- Providing specialist rail systems expertise to projects which may include:
  - Assisting in setting up and transferring skills to manage requirements

- Assist with planning and coaching teams to provide assurance evidence
- Support system engineering activities for feasibility, outline and detailed design of systems
- Assist in the production of System Engineering plans and processes for requirements management, systems acceptance, interface management, systems integration, assurance and RAMS
- Assist in the production of design documentation
- Assist in the development of system and software models
- Help senior staff in the preparation of bids and tenders

You will be able to explain systems engineering techniques to engineers and managers, covering requirements management, assurance and interface management.

**Additional we are looking for:**

- A university engineering degree in electrical, electronic or information systems
- Ideally, a master's degree in Railway Systems Engineering
- Ideally, an active member of INCOSE and/or the IET
- Working towards CEng registration
- Experience in design on rail projects following Network Rail's GRIP, London Underground's PMF or similar life-cycle development model
- Familiar with engineering safety management practice according to the Common Safety Method, Yellow Book or equivalent

**Desirable Skills and Knowledge:(ideally three + of the following):**

- Able to specify or design train control, traffic management, rolling stock or customer information systems
- Able to collate, analyse or manage engineering safety hazard logs
- Able to design or analyse system architectures using TOGAF or similar methodology
- Able to estimate time and effort for own activities
- Able to use DOORS, or alternative tools such as Cradle or Slate, to manage requirements
- Able to create custom tools in Excel, Word, Visio or Access (such as VBA macros) to streamline the processing of data and documents
- Able to construct logical evidence-based arguments using Goal Structuring Notation (GSN)
- Able to employ RAMS techniques (e.g. FMECA, fault tree analysis) to quantify reliability, availability and maintainability of rail systems
- Able to conduct audits against standards, plans and procedures

**What we're looking for in you:**

You will be passionate & commercially aware with a sound technical knowledge enabling you to be an integral part of our Rail team. You will have great communication skills and be able to demonstrate highly effective networking skills.

**Rewards & Benefits:**

We offer a competitive salary at all levels and one of the best benefits package in our sector. Core benefits include Private Medical Insurance, Life Assurance, Accident Assurance and Income Protection cover. You will also have access to a grade-related Flexible Benefit Fund which you can choose to take as extra cash or spend on a wide range of Choice benefits to help you with your work/life balance and financial security.

In addition all permanent employees are eligible for the Global Profit Share Scheme where employees could receive two Profit Share payments per year.

Arup is a place where creativity, innovation and exciting technical challenges are always possible; we are part of a team that enjoys what they do, embracing a unique culture. As a global firm we can develop careers in the UK or abroad through international assignments, and our commitment to training and development is fundamental to ensure we continue to develop our staff and look to the future requirements of our clients.

If you share our passion, why not talk to us about a rewarding career with Arup

Quality and service are at the core of our business and we are members of the Association of Professional Staffing Companies. Electus has also been ISO9001 accredited since 2004. Each and every candidate and client is vitally important to our success and we do our utmost to ensure they have a great experience with us.

We use the best technology & search techniques to leverage the physical and digital spaces to give us a global talent pool. Utilising our superior sector knowledge, we have tailored our services to provide pinpoint support throughout the hiring process. Our teams of industry qualified experts possess deep understanding of the sectors in which we specialise developing niche networks of highly skilled individuals.

## Senior Satellite & Systems Engineer

Apply now

Your record in Satellite and Systems Engineering within the Defence market could make an immediate impact with my client. Your ability to provide a systems approach in the fields of Satellite, Radio Frequency (RF) communications within various functions would be fundamental to the continuing growth of this company.

Working within the Defence market, you will provide a systems approach to specialist engineering design and support services in the fields of Satellite, Radio Frequency (RF) communications and general engineering. Along with an excellent remuneration package, this role offers a career in consulting, continuing professional improvement and various career development opportunities.

Below are some further details on the role. At the bottom of the page is where you can apply.

### Senior Satellite & Systems Engineer

#### About the job:

A customer facing role reporting to the Head of Programmes and Engineering  
To transition the current engineering team into an integrated project engineering team that efficiently supplies the engineering design and support services required to deliver projects.  
To provide both a system and a specialist satellite engineering capability to the integrated project engineering team.  
To identify, create and apply appropriate team training and mentoring packages to support the transition to an integrated project engineering team.  
To create and document the engineering processes required to facilitate the creation of an integrated project engineering function.  
Control and allocation of engineering resource to provide the Prime Contract Programme Office (PCPO) and Solutions team with appropriate resource to facilitate task, minor project and major project requirement collection, design, production, deployment, test, acceptance and support as required.  
To support the PCPO and the Solutions team as required in the preparation of estimates, bid documentation, specification, pricing, tender, Gate and proposal documents for new opportunities.  
Be a source of technical expertise in RF antenna systems and associated equipment, including radiation hazard.  
To contribute to complex and diverse projects and bids within the communications arena for a broad range of security and defence sector custom  
The role will also include work on other RF systems from RF switching, coaxial feeder, RF over fibre to antennas working at frequency ranges of LF through to microwave.  
Provision of technical expertise in RF antenna systems and associated equipment.  
Design, procurement, management and supervision of the implementation of antenna systems and associated equipment  
Travel abroad and in the UK when necessary.

#### About you:

Hold a relevant engineering degree or alternatively HNC/HND qualification desirable  
Chartered Engineer (CEng) or Incorporated Engineer (IEng) status registered with the Engineering Council in an appropriate engineering discipline.  
Possess 5-years' experience in an antenna systems engineering role, working with systems similar to those used in the high power communications and broadcast industry.  
Possess 5-years' experience in the antenna engineering project environment working to deadlines using quality procedures.  
Knowledge of how to perform RF testing on these and other RF systems.  
Have the knowledge and skills needed to work on international projects in a multi-disciplined, multi-tasking team environment.  
Have a general understanding of project management systems and processes.

## Senior System Integration Engineer – Metrology Systems

### About the Job

Senior System Integration Engineer – Metrology Systems

Stockport, Greater Manchester

c£51,000

Our client is a provider of integrated energy management solutions. As a world-leading company, they are currently expanding, and are now looking for a Senior System Integration Engineer to join their team.

If you have systems engineering design and validation experience, this is a fantastic opportunity to develop a challenging, yet highly rewarding career, with an internationally successful business.

In this important role, you'll have the chance to help provide technical direction to the business and make your mark on our client's future designs.

As the Senior System Integration Engineer, you'll be responsible for defining, designing and implementing the system designs for our client's range of smart meters.

Overseeing a team of innovative Mechanical, Electronic and Software Engineers, you'll implement product design and technology investigations to support R&D initiatives.

Researching and documenting metrology systems, you'll define design validation test plans and test your designs to ensure that products meet specifications and metrology regulations.

Analysing validation results, you'll identify any anomalies and determine their root cause. Additionally, you'll liaise with Project and Product Managers to plan project timelines and budgets.

To be considered, you must have:

- Previous experience gained within a systems engineering design and validation environment
- A proven track record of leading engineers in cross-disciplinary teams
- Experience of the design and validation of high volume products
- A track record of working and testing against global product standards such as IEC, EN and MID
- Experience of design for EMC, Design for Test and design for high volume manufacture
- A BSc or BEng (or equivalent) in a technical discipline such as mathematics, physics or engineering

As the Senior System Integration Engineer, you must be inquisitive with excellent problem-solving abilities. Analytical and focused, you must also have a collaborative approach and superb communication skills.

To apply for the role of Senior System Integration Engineer (Metrology Systems), please apply via the button shown.

This vacancy is being advertised by Web Recruit Ltd. The services advertised by Web Recruit Ltd are those of an Employment Agency.

## Senior Systems Design Engineer

### About the Job

Do you design automated warehouses or manufacturing facilities? Do you use CAD or Auto CAD? If so take a look at this role with a leading player in this field.

Due to continuing growth, a leading worldwide supplier of warehouse automation design, installation and support seeks to further strengthen its solution design team. The job remit will include involvement in a wide range of solutions across varying scales. Projects will range from single area automation to extremely large and highly complex Distribution Centre automation design and integration. The automation you are used to working with will be automated picking and sortation systems; high bay storage cranes, conveyors, carousels, ASRS, robotics etc.

We seek a rationally minded individual with a strong automated warehouse or automated manufacturing design background. Your previous experience in warehouse / manufacturing / industrial facility design will allow you to empathise with clients' individual operational complexities, build credibility with them, design feasible warehouse and distribution solutions tailored to their needs and support the Project Managers during implementation.

It goes without saying that you will have experience of analysing clients' data and current systems along with evaluating their business needs in order to design warehouse / manufacturing automation designs. Candidates need to be accurate, highly numerate and detail-focused with strong skills in Excel manipulation. You will have extensive experience of creating design drawings using CAD / Auto CAD and perhaps have experience of Class simulation modelling as well as knowledge of other tools such as CAST.

If you have previous experience in a solution design role either within a logistics, manufacturing or industrial environment and know what a 'Best-in-Breed' automated solution looks like then we are keen to hear from you. This is a fantastic opportunity to join a global organisation who can offer on-going career progression opportunities. Some UK and international travel can be expected. Candidates with the right skills set who have a fluency in German at business level will have a distinct advantage; however this is not a pre-requisite. Apply today as BiS Henderson is keen to make

## Senior Systems Engineer - Hertfordshire

### About the Job

A **Senior Systems Engineer** is required to join an Innovative Communication Systems Technology Company on a Permanent basis.

The **Senior Systems Engineer** will provide systems engineering support to commercial space customers and will involve procurement, design, implementation and testing of complex integrated satellite communications networks.

The **Senior Systems Engineer** will be responsible for design, development, analysis of overall architecture of telecommunications systems, both hardware and software.

In addition the **Senior Systems Engineer** may be required to work at customer's premises and will have to integrate seamlessly into the customer's team.

**Technical Skills, Experience and Responsibilities for Senior Systems Engineer**

- Bachelor degree in a relevant subject (Electronics/Communication Systems)
- Planning and delivery of systems and products through full lifecycle
- Requirements capture and analysis, design, development, test and integration
- Experience with Windows and Unix/Linux operation system
- Theoretical and practical knowledge of TCP/IP networking
- Experience with Ethernet and Broadband WAN networks, Cisco routers and switches
- IP network routing and switching and Testing and troubleshooting methodologies
- Ability to use and develop simulations for communications systems
- Excellent attention to detail and a quality-improvement mind-set
- Excellent working knowledge of state of the art communications systems
- Determining integrated hardware and software architecture solutions
- Coordinating design and integration of system and subsystems
- Development of detailed communication system test plans and creating test reports
- Assist with Systems development with the investigation and resolution of issues

**Security Clearance (SC) will be required for this role so only applications from candidates that are able to attain the necessary clearances will be considered.**

If you feel you meet the requirements for the role of the **Senior Systems Engineer** then apply directly or contact **Peter Heap at Jonathan Lee Recruitment**. Either Direct Line 01384 446102 or Email suitable MS Word CV's to **peter.heap@jonlee.co.uk**

Your CV will be forwarded to Jonathan Lee Recruitment, a leading engineering and manufacturing recruitment consultancy established in 1978. The services advertised by Jonathan Lee Recruitment are those of an Employment Agency.

### Senior Systems Engineer - Linux - £40-55k

**Senior Systems Engineer - Linux**  
**Hampshire; Southampton, Winchester area**  
**£40,000-55,000**

A great opportunity for an experienced Linux Systems Engineer to join an established IT business in leading the design and implementation of a company's IT systems and platform. The role will work at a senior level and report to the Directors.

The role would best suit candidates who are passionate about their job and enjoy being involved in all aspects of a company's Systems and Networks, building things from the ground up and can demonstrate a depth of knowledge in Systems and Network Architecture.

The Senior Systems Engineer will provide technical and business expertise, commercial analysis and high-level design across Hardware/Software systems and Network Architecture in a fast paced, dynamic working environment.

You will support, enhance and provide technical leadership on the current hardware and software technologies and actively provide leadership in developing ICD's, SDK's for existing and future embedded hardware.

**Required experience:**

- Must be in a similar role currently, able to demonstrate extensive Linux Systems experience
- Experience of maintaining a resistant and secure platform across a high traffic environment.
- Experience of working in a virtual environment
- Experience of Cisco Networking, Routers, Switches
- Agile/SCRUM understanding
- Degree qualified or qualification in an appropriate technical discipline.

**Desirable:**

- Cassandra, Hadoop, Nginx or KairoDB
- PHP programming
- Aerospike
- Cisco Certified Internet Expert (CCIE) certified

The company recognise high performers and offer excellent career progression. The full details are available at [Paulgrace@Spectrumit.co.uk](mailto:Paulgrace@Spectrumit.co.uk)

## About Us

We began as a small, passionate group of individuals who wanted to provide a distinctive and exceptional IT recruitment service. We'd seen agencies offering a division devoted to IT recruitment, but there was still a niche that we could fill. Combining our collective knowledge about the IT industry, the team has continued to grow and develop an extensive understanding of the local IT and IS sectors and their needs.

Made up of a team with unique expertise in market trends and recruitment needs, we incorporate our skills to make the most of the opportunity for both clients and candidates. Along the way, our approach to IT recruitment has secured clients, candidates and ensured loyalty. We're a customer-driven company, and our results reflect this. Our established connections have allowed us to find roles that our candidates are perfectly matched to.

## Senior Systems Engineer - Systems Integration, Agile

### About the Job

A leading firm within the Transportation sector is currently seeking skilled Senior System Engineer to join them at their Surrey offices. As part of a fast-paced, expanding team working on a multitude of projects, you will be tasked with capturing and analysing new customer requirements for multi-disciplinary systems and designing the resulting systems solutions. This will include both new projects and variations. The ideal candidate will come from a requirements based engineering role within a software or hardware environment. Key technologies used within this company are Agile software development (C++, C#), Embedded development in Windows/Linux and Electronics Design (high speed digital). If you have experience in requirements based engineering in one or more of these areas (Software\Electromechanical\Embedded) this could be a great opportunity for you.

You may sometimes serve as a team leader. This position typically works under general supervision and direction. You will regularly exercise discretionary and substantial decision-making in this role.

### Essential Job Duties & Responsibilities

- Performs system requirement analyses and develops system and subsystem interface specifications.
- Prepares design and operational documentation.
- Interfaces with customers, contractors and marketing vendors.
- Participates in in-house design reviews and technical status meetings.
- Plans and performs system/subsystem integration, testing and system validation.
- Performs system modelling and simulation, trade studies, and complex system functional analyses and designs.
- Defines test strategies, schedules, data requirements, and associated test equipment needs.
- Coordinates and develops project concepts, objectives, specifications and resource needs. May have responsibility for cost, schedule and technical performance of assigned projects.

- • Provides marketing support, customer/subcontractor liaison, and technical direction to engineers and other company departments.
- Evaluates third party vendor capabilities, products and services.
- Participates in writing new business proposals, and preparing associated cost rationale.
- Participates in both internal and external design reviews and status meetings.
- Interfaces with Quality Assurance to ensure application of quality standards.
- Works closely with other engineering disciplines to ensure coordination and integration of system elements and interface requirements, both internally and with teammates/subcontractors.
- Keeps informed of new developments in systems engineering techniques and advances in technology.
- May serve as a team member to solve engineering problems and develop improved engineering processes.

#### Minimum Job Requirements

Four-year college degree or equivalent education in software or systems engineering or related technical discipline. Five years of related experience in a software or systems engineering role. Ability to effectively communicate verbally and in writing, interface with customers, subcontractors and vendors, and deal with employees in engineering and other departments. Automatic Fare Collection and/or transportation systems knowledge a plus. Must be able to work under project deadlines and associated cost and schedule constraints.

## Senior Systems Engineer (Aerospace, DOORS)

### About the Job

#### Senior Systems Engineer (Aerospace, DOORS)

#### Cambridge or North West London

#### 6 month contract

#### Rate - £60 - £65 per hour

Senior Systems Engineer - A long established and successful defence engineering company are looking to recruit a 1st class Senior Systems Engineer to support the Systems Design function in order that both project and statutory requirements are met and to improve the effectiveness of the systems design function within the company.

#### Senior Systems Engineer - Key Responsibilities

- To support bids and projects as required by the Engineering Manager
- To competently resolve technical problems associated with assigned products
- Strive to continuously improve the processes and procedures for which they are responsible
- To help ensure engineering activity is carried out in accordance with engineering procedures
- To support the preparation and updating of project plans for assigned projects
- Ensure adequate constructive challenge is presented in design reviews to identify and help mitigate any key issues

#### Senior Systems Engineer - Skills and Experience

- Good experience of electronics/systems design in aerospace
- Technically competent to assess technical risk in their area and to honestly present the detail of these risks
- Familiar with appropriate standards within area

#### Specific

Conversant with maintenance of safety critical architectures

Conversant with safety and certification requirements for aerospace

Familiar with circuit design, analysis, test and modelling techniques for analogue and digital circuitry

Familiar with software design  
Familiar with DO254  
Familiar with DO178B  
Familiar with DO160  
Familiar with the manufacturing techniques used for aerospace electronics  
Able and willing to participate in product investigations resulting from aircraft incidents  
Good level of experience with formal requirements and their negotiation, verification and management  
Familiar with C  
Familiar with MATLAB  
Familiar with DOORS

Desirable

Exposure and experience with some of the following is required:  
Familiarity with electrical, thermal and mechanical stress calculations  
Familiarity with the responsibilities of acting as a Compliance Verification Engineer  
Familiarity with the creation  
Familiarity with PCB design  
Familiarity with EMC techniques  
Familiarity with software techniques  
Familiarity with reliability and reliability prediction  
Familiarity with system design practice  
Familiarity with aerospace environmental issues

In return we can offer a competitive rate plus the opportunity to join a company going from strength to strength in their industry. If you feel that you have the skills and experience to perform to the highest level in this position then please apply online today or call Matt on 01923-225581 for further information.

### About Electus Recruitment

Electus has been introducing leading technical and engineering organisations to highly skilled candidates in the Aerospace, Defence, Energy & Infrastructure sectors since 2003. Quality and service are at the core of our business and we are members of the Association of Professional Staffing Companies. Electus has also been ISO9001 accredited since 2004. Each and every candidate and client is vitally important to our success and we do our utmost to ensure they have a great experience with us.

We use the best technology & search techniques to leverage the physical and digital spaces to give us a global talent pool. Utilising our superior sector knowledge, we have tailored our services to provide pinpoint support throughout the hiring process. Our teams of industry qualified experts possess deep understanding of the sectors in which we specialise developing niche networks of highly skilled individuals.

## Senior Systems Engineer

**Apply now**

Your experience Systems Engineering and knowledge of developing high quality Software and Hardware product requirements will play a crucial part in working with the systems design team to develop systems design. As a Senior Systems Engineer, you will develop the systems design for a tactical C4i system.

You will be working for a leading international multi-disciplined engineering consultancy as part of their defence business. A good salary, corporate benefits package and transparent career development opportunities are on offer within this vibrant environment. You will receive significant mentoring from senior staff but will be expected to be focussed on undertaking consulting work from the outset.

Read on for specifics on the job. To apply click the Apply Now button at the bottom of the page.

#### About the Job:

The client requires a Senior Systems Engineer to focus on developing the System Design, in accordance with the logical architecture, and specify the system elements (equipment and products). You will be required to do the following:

- System Requirements Analysis
- System Design & Modelling using ARTISAN/Rhapsody
- Definition/Documentation of Architecture and System Design
- Trade Studies
- Change Management
- Writing of un-ambiguous atomic requirements
- Definition of threshold and objective performance requirements
- Authoring of high quality documentation

#### About You:

To be the right fit for this Senior Systems Engineer job, you will have experience developing the System Design for a Tactical C4i System, with proven ability to develop high quality Software and Hardware product requirements. They will be familiar with conducting trade studies and working within design constraints.

You will have good understanding of designing for specialist and support engineering considerations (including security, safety, ILS, human factors) as well as a strong understanding of requirements associated with man-deployed and vehicle-deployed equipment and excellent communication and presentation skills. Knowledge of BOWMAN systems and commercial IT architecture would also be useful.

Senior Systems Engineer  
South Wales  
37 hours a week  
£36,000 - £47,000  
Permanent role

Keywords: Systems engineer, Hardware, Software, Architecture, Design, Requirements, Definition, ARTISAN, Rhapsody, BOWMAN, C4i.

Due to the nature of work undertaken at our client's site, incumbents of these positions are required to meet special nationality rules and therefore these vacancies are only open to sole British Citizens. Applicants who meet this criteria will also be required to undergo security clearance vetting, if not already security cleared to a minimum SC level.

**Skills and Experiences:**

- A minimum of 5 years' experience in the role of Technical Engineer / Systems Engineer / - Systems Administrator at enterprise level
- Minimum 2:2 Degree or equivalent in Computer Science or similar subject. Specialist IT qualifications (e.g. ITIL / Prince2, Cisco, Linux) desirable
- Ability to assess technical problems calmly and efficiently, and to deliver services in a team environment, with an emphasis on knowledge capture and sharing
- Ability to manage multiple complex tasks and see them through to completion with excellent time management, identify operational priorities and excellent written, verbal and listening skills
- Ability to organise and chair meetings, and communicate complex technical subjects in concise, manageable language
- Ability to work through/with remote 3rd line support teams with good Communication Skills (in particular telephone manner)
- Self-starter with the ability to work well with others yet remaining calm in periods of operational pressure
- Strong background in Linux/Unix Administration
- Ability to use a wide variety of open source technologies and cloud services (experience with AWS is required)
- Experience with SQL and MySQL
- A working understanding of code and script (such as shell script, PHP, Python, Perl and/or Ruby)
- Knowledge of best practices and IT operations in an always-up, always-available service

**Desirable Experience:**

- Exposure to ISO27001 framework
- Supporting SAN / NAS environments
- Automation/configuration management using either Puppet, Chef or equivalent
- GITHUB / SVN or equivalent
- Supporting LDAP (e.g. PHPLDAP)

This is an exciting opportunity for an enthusiastic, passionate and experienced Senior Systems Engineer to join an expanding company and help deliver outstanding technical expertise to everyone who uses our services. This role involves 1 in every four weeks to be on call out of office hours. Competitive salary. Apply now!

### Purpose of Position

Our client is a leading prime contractor and complex system integrator working in partnership with the UK's Ministry of Defence (MOD) and other customers. The C4I business unit designs, develops, integrates, and provides in-service support for Tactical Voice/Data communications systems using a variety of technologies. Our client is the Prime Contractor and System Integrator for Bowman which provides a secure digitized communications capability to the British Armed Forces and other customers.

### Responsibilities

This role is for a Senior System Engineer to work within the System Modelling team. The team is responsible for capturing the overall goal architecture for the project, using Artisan RTS, as well as the subset applicable for each of the project increments. The role requires a candidate who is comfortable with abstract thinking. The successful candidate will gain hands-on experience working with other engineers on the team to progressively develop technical, interpersonal and team working skills that are fundamental to the business and provide guidance and leadership for more junior engineers. The candidate's capabilities will increase through both on the job experience and our clients commitment to continuous professional development.

### Education/Experience

Essential Degree qualification (2:1 honours or above) in an Engineering (system, software, electronic communications, computer systems) or

Experienced in engineering methods and tools for system modelling (SysML)

A belief in and understanding of the benefits of Model-Based Systems Engineering (MBSE)

Experience in roles that demonstrate technical leadership and application of system engineering skills, with a track record of delivery

Demonstrates understanding of the system engineering lifecycle and phases, and challenges associated with system engineering in a delivery focussed, commercially successful organisation

Confident and effective dealing with Customers and End Users

Good written, verbal and interpersonal communication skills as well as motivation, integrity, professionalism, flexibility, commitment and innovation

Excellent analytical and problem solving skills

#### Desirable

Defence/aerospace industry background

Familiar with tactical network infrastructures including networks, radios and system management considerations

Good understanding of messaging and routing protocols, TCP/IP, UDP, including those applicable to wireless (as well as wired) environments

Experienced in the use of the following engineering tools: DOORS, Artisan Studio, IBM Rational Rhapsody, HP Quality Centre

Good understanding of the OSI-layered communications model

Knowledge of security processes and controls for secure military systems

Knowledge of safety-related aspects of engineering, including SIL

Knowledge of Human Factors processes and techniques

Track record of influencing process improvement to increase efficiency/reduce cost/increase quality of outputs

We are a dedicated technical recruitment consultancy delivering specialist engineering personnel to the safety-critical, regulated technology and manufacturing sectors across the UK

## Senior Systems QA Engineer

### About the Job

Senior Systems QA Engineer

Lisburn, Co. Antrim

£Competitive DOE

Our client provides next-generation technologies for a variety of industries. They are now looking for a Senior Systems QA Engineer to join their team in Lisburn.

If you have extensive experience of verifying or integrating large or complex distributed systems, this is an exceptional opportunity to take on an exciting, new challenge with an industry-leader.

In this important role, you will have the chance to collaborate with a talented team and make a genuine, lasting impact on a cutting-edge product range.

As the Senior Systems QA Engineer, you'll be responsible for defining, documenting and implementing system test plans and test cases for products.

Joining a diverse, multicultural team, you'll play a key role in enhancing the development, testing and quality of our client's systems. You'll define testable user stories and acceptance criteria, swiftly resolving any defects as they arise.

Performing exploratory testing, you'll carry out manual system tests and analyse results to ensure that requirements are met. You'll facilitate the integration testing of new features and improvements.

You'll carry out tests using production data where possible to minimise deployment issues and assess the impact on production. Additionally, you'll identify ways to maximise test automation and support implementations by developing test scripts or harnesses.

To be considered, you must have:

- At least five years' experience in the system integration or verification of large or complex distributed systems
- The proven ability to accurately test, analyse, evaluate and report results
- A third level qualification in computer science (or equivalent)

As the Senior Systems QA Engineer, you must have excellent analytical and problem-solving abilities. Pragmatic and methodical, you must also have superb communication skills, both written and verbal.

To apply for the role of Senior Systems QA Engineer, please apply via the button shown.

This vacancy is being advertised by Webrecruit Ireland Ltd. The services advertised by Webrecruit Ireland Ltd are those

of an Employment Agency.

Additional Keywords: Senior Systems QA Engineer, Senior Quality Systems Engineer, Lead Quality Engineer, Lead QA Engineer, Systems Quality Manager, Senior System Integration Engineer, Senior System Test Engineer, Senior Test Engineer, IT, Quality.
