DevOps Systems Engineer

DevOps Systems Engineer - We are seeking a DevOps Systems Engineer with exposure to automation tools and scripting using technology like Ansible, Puppet or Chef to help move a global media group towards more modern methods.

As the DevOps Systems Engineer you will work with the dev and database teams to automate the environment and improve processes and scalability. The team are also moving towards NoSQL and Big Data technologies, alongside introducing continuous integration so this is a great chance to work in a modern tech environment.

Skills required for the DevOps Systems Engineer:

- Demonstrable knowledge of automation tools which could include Ansible, Puppet or Chef
- Experience using a core programming language; Python, Golang, Java, Perl or Ruby
- Exposure to containerisation using tools like Docker or Kubernetes
- Knowledge of NoSQL or Big Data databases would be beneficial but not essential

DevOps Systems Engineer

Salary: £55-60k + Excellent benefits including health, pension and a superb work life balance

Location: Central London

Contact: Tom Parker

Systems Engineer (WinOps, AWS)

Systems Engineer - We are seeking an Systems Engineer to help improve the AWS cloud services as well as wider WinOps based infrastructure for one of Europe's best known travel groups.

As the Systems Engineer you will work with high availability and scalable enterprise infrastructure with a focus on AWS cloud, in Windows/Microsoft environments. The team are moving towards new WinOps/DevOps tools and methods with the use of automation and viewing 'infrastructure as code'.

Skills required for the Systems Engineer:

- Commercial cloud experience using AWS
- Good knowledge of Wintel/Microsoft technologies and infrastructure
- Knowledge of web platforms and load balancing and automation tools such as Ansible, Puppet or Chef would be beneficial

Systems Engineer (WinOps, AWS)

Salary: £40-50k + substantial bonus (upto 20%) and benefits package

Location: Luton, Bedfordshire

Key Skills: Cloud Infrastructure, AWS, Amazon Web Services, Windows, WinOps, Ansible, Puppet, Chef

Systems Engineer - Defence

Permanent

South Hampshire

£££

An amazing opportunity to join a well established global corporation, one of the oldest and most notorious in the Defence sector, has arisen for a Systems Engineer to join on a permanent basis at their South Hampshire location.

You will carry out responsibilities in areas related to:

- Systems Engineering including requirements elicitation
- Architecture modelling
- Generation of technical material for competitive bids
- Engagement with technical and non-technical stakeholders

The successful candidate will have experience in:

- Systems engineering lifecycle from requirements capture through to system delivery
- The application of model-based system engineering
- Requirements elicitation and analysis
- Architecture options assessment
- Strong communication and leadership skills
- Enterprise-level architecture modelling

You will be required to work regularly with - Project Managers, Bid Managers, Account Managers, Business Area Leads, Capability area leads and customers so will need to be comfortable communicating at all levels.

This is a fantastic opportunity to join renowned organisation in their sector, if this sounds like the opportunity for you then APPLY NOW!

Systems Engineer - C++

Permanent**Havant****£ Competitive**

Do you have what it takes to join a stable and fast-growing company that encourages professional development, fosters teamwork and rewards ingenuity? Then this is the opportunity for you!

As one of the world's leading Defence and Aerospace companies, this is beyond what you'd expect in a job!

We are growing rapidly and have a number of exciting positions available at our Havant Site!!

We realise that our employees are one of the key to our successes. We look for Systems Engineers who share our passion to thrive and generate results. To join a team of like minded individuals you MUST be comfortable in the following:

Systems Engineer key responsibilities:

To design and produce automated Test Procedure Sets (TPS) at our facility, in Havant, that meets various equipment needs, including electro-mechanical, radio frequency and electrical interfaces, across a range of potential platforms; together with the necessary accreditation, certification and formal customer acceptance.

Systems Engineer Requirements:

- * Proven experience in system design, development and performance analysis.

- * Proven experience of ATE TPS technical development and including TPS development fast-track techniques, TPS fault diagnosis, TPS development lessons learnt experience, and experience of effective solutions in electrical, mechanical and software integration.

- * Proven Experience of clearly articulating system requirements, and associated electrical and mechanical solutions.

- * Familiarisation with C++

- * Systems, electrical, mechanical and software engineering background or experience sufficient to provide expert assessment of design, the creation and review technical interfaces, test requirement creation, workload planning, acceptance procedures and

results, diagnose and resolve complex problems.

All applicants **MUST** be able to gain full ***UK MOD SC Clearance*** and lived and worked in the UK for ***the last 5 years!***

If you think that this would be a great Systems Engineering opportunity for you and you have the required skills, please apply with a copy of your CV to me today, or alternatively call Sian Rouse on 01923 225581 for further details!

Systems Engineer

Location - Leicester

Rate- £250-280

Length- 3 months+

We are looking for Systems Engineers to work on an exciting technology refresh project and perform a mixture of operational and support work. In this role, you will be the main technical point of contact for the on-site engineering team.

Shifts will be mainly nights covering 3:30pm - 8am dependant on business requirements, however day shifts will be required during the start of the project covering 9-5pm.

Required Experience:

- Previously worked on Systems and Infrastructure Projects (IT Deployments)
- Networking (LAN, TCP/IP and Wireless configuration)
- SQL Server 2012, Windows Server 2012, OS Configurations, Hyper-V, IIS, Remote Desktop Services, Microsoft System Centre, Scripting & Automation (PowerShell/VB Script)
- Ability to plan and conduct technical testing with documentation

Interviews will be held early December with start date 3rd January.

If you have all of the above experience and are looking for an exciting project to take you through 2017 then get in touch!

Josef Lodge / / ">

Systems Engineer / IT Deployment / Networking / LAN / TCP/IP / Wireless configuration / SQL Server 2012 / Windows Server 2012 / OS Configuration / Hyper-V / IIS / Remote Desktop Services / Microsoft System Centre / Scripting / Automation (PowerShell/VB Script)

Systems Engineer, Infrastructure, Windows Server, Oxford c.£50k

at/corriculo/jobs)

This is a fantastic opportunity for an experienced Systems Engineer to join an internationally-recognised company based in Oxfordshire.

My client is seeking a Systems Engineer to play a core role in setting the direction and service of my client's IT department, during an exciting period of growth.

The Role

As the Systems Engineer you will be joining a highly talented team, working on enterprise-level projects. You will bring expert IT Infrastructure knowledge to complex, on-running, projects.

Working as a Systems Engineer, you'll be expected to take responsibility for integration and delivery of solution onto external customer sites as well as provide continued support to the infrastructure.

This position would suit an experienced Systems Engineer who doesn't want to provide just support, but seeks the variety and challenge and interest of project work. You'll need to be able to juggle and prioritise support requests and issues as they come through and will recognise the importance of providing clear and reassuring communication to stakeholders!

The Package

In addition to a salary of c.£50,000 + Pension + Medical care; my client offers a great working environment. They also invest heavily in their staff; committed to providing a productive environment, they offer lots of learning opportunities along with the chance to work with some of the latest technology!

What do you need?

Technically, you'll need to be comfortable in a varied, Microsoft environment, an environment that comprises:

- *Windows Server 2008 / 12 R2

- *Active Directory, Group Policies, DNS, DHCP

- *SQL 2014

- *Windows 10

- *HP/Dell Switches

- *Scripting skills

- *Many more!

Whilst you won't be expected to have deep experience in every area, a broad background and technical knowledge base coupled with the desire and ability to pick up new technologies will be required, as will the experience of working at an enterprise-level.

If you have any questions or would simply welcome a chat about the position and company, just call me or drop me an email, as I'd love to hear from you! If, though, you think this role is for you and you'd like to learn more, then please apply now.

Systems Engineer, Infrastructure, Windows Server, Hyper-V, Oxford

Corriculo is a specialist, boutique IT Recruitment Consultancy who, from their Oxford base, source high-level IT professionals to join a host of major clients. Corriculo is focused on providing the very best service possible to both candidates and clients alike. We have strong company values which we strive to match. Honesty & integrity, commitment & responsibility, continuous improvement, sharing and quality create the foundations upon which the company is built and underpin our approach to the recruitment process.

Corriculo Ltd acts as an employment agency and an employment business.

My client are a This exciting new Systems Engineer (2nd/3rd Line Support) role will be based in a modern and vibrant office **reputable Software House who are looking for talented Systems Engineer who shares the same passion for cutting-edge technology**. This new Systems Engineer role will be based in a modern office space in the heart of Oxford. The successful Systems Engineer will be responsible for supporting vital systems and infrastructure on a daily basis as the company continues to grow.

The ideal Systems Engineer (**2nd/3rd Line Support Analyst**) will have excellent communication and problem-solving skills and come from a technical background. The successful Systems Engineer will be joining a **small but well-formed team**, assisting the Lead System Administrator and Infrastructure Director with systems and 2nd/3rd Line Support.

Some of the **day-to-day responsibilities** of the 2nd/3rd Line/ Systems Engineer include:

- Purchase and set up new computers/servers, upgrades and warranty
- Assist staff with their support queries, managed via Jira.
- Investigate system issues (e.g. if there is a server failure within the hosting facilities); the expected level of support will depend on experience
- Implementation and upgrade of systems (such as SharePoint, Exchange, Hyper-V)
- Patching of servers
- Testing of backup and recovery processes

The **Systems Engineer** will be responsible for providing support and administration for the:

- Active Directory, DHCP, DNS, WSUS, IIS, Remote Desktop Services
- System Center VMMare and Windows Hyper-V clusters
- Exchange, SharePoint, Office365 and SQL Server (including High Availability)
- System Center Data Protection Manager and Configuration Manager
- Apache HTTP, Jira, Wordpress, Drupal, Proftpd, OpenDJ, MySQL, SVN and GIT
- Windows, Windows Server and Linux Ubuntu and SUSE
- Cloud hosting with Azure and Rackspace as well as private cloud solutions

Skills/experience **desired** by the Systems Engineer include:

- Programming experience, working with SQL, C#, PowerShell or ASP.NET

- Interest in cloud computing, security and new technologies

- Knowledge of network topology, firewalls and security (VLANs, Routing, IEEE 802.1X etc.)

This new **Systems Engineer** role is based in an **ideal central location** in the **beautiful city of Oxford** only a short walk from the train station. It is **easily commutable** from various locations in the area including Abingdon, Aylesbury Bicester, Banbury, Buckingham, Didcot, High Wycombe, Reading, Swindon, Thame, Witney and many more.

As well as joining a passionate team in a prime Oxford location, this new Systems Engineer role will working with cutting edge technologies for a reputable and professional company. If you're interested and feel you'd be a good fit for the role please apply now for immediate consideration.

Referral Scheme: If this role isn't for you then perhaps you could recommend a friend or colleague to Haybrook IT. If we go on to place that person in a permanent or temporary capacity then you could be rewarded with £500!! Please see our website for terms and conditions.

Haybrook IT Resourcing is Oxford's leading IT recruitment agency. With exclusive access to some of the region's most successful companies, send in your CV today to secure your next IT position.

Haybrook IT Resourcing Ltd acts as an employment agency and an employment business.

We value diversity and always appoint on merit.

3rd Line Systems Engineer - Birmingham - £35,000 per annum

at/experis/jobs)

Windows Server 2003, 2008 and 2012, Active Directory, Telephony, Infrastructure, LAN/WAN, Network Security, Cisco Network, Firewalls, WM Ware.

Our client, an established UK based FMCG organisation urgently requires a focused, enthusiastic and professional IT Network Support Analyst based at their HQ in Birmingham.

You'll be responsible for the efficient operations of all IT services, providing third line support on all IT services and assisting with the implementation of high quality IT services.

Role Responsibilities:

- * Experience in provision of IT support is essential, taking the lead in one of the key IT focus areas of End User Compute, Security, Networks, Servers and Storage.
- * Experience of providing third level support in at least two areas of IT (End User Compute, Security, Networks, Servers and Storage) is essential
- * Exposure to the various areas of IT, with a good understanding of the IT solutions available within the market place desirable
- * Good understanding of IT Systems delivering solutions within multi-site, highly resilient, multi technology infrastructure.
- * Able to communicate at all levels with an excellent customer facing manner
- * Experience within an IT service management environment desirable
- * Design and configuration, systems capacity, performance and availability and security for both internal and external systems and networks.

Key Skills:

- * ITIL v3 and Prince2 foundation level qualifications desirable
- * Regular travel to other sites within the business and occasional travel to suppliers will be required
- * Educated to degree level within an IT related discipline
- * Microsoft Windows 7
- * MCSE
- * 3rdLine Windows Desktop & Server Support
- * Windows Server 2003, 2008 and 2012
- * Active Directory
- * Network Troubleshooting
- * Cisco Network - CCNA
- * Routers & Switches
- * WM Ware
- * LAN/WAN
- * Telephony

You will join a leading company that is experiencing growth, has a supportive and friendly environment, a competitive starting salary and receive training as part of your personal development plan.

This is a great opportunity for a driven and ambitious professional to join a successful organisation where hard-work is rewarded.

If this is potentially of interest, please apply. Alternatively contact Denise for more information.

Avionics Electrical Systems Engineer

£38-50k

Bishop's Stortford

I'm recruiting on behalf of my client - a leading Aerospace modifications company - for an Avionics Electrical Systems Engineer.

Working closely with the Engineering Director, you will focus on the generation of Design Data for Avionics / Electrical modifications on mainly large commercial aircraft such as the B767.

Experience with generating system layouts and installation concepts is essential, along with a good knowledge of EASA Part 21.

This is an excellent position for an Avionics Electrical Systems Engineer to progress into a CVE position quickly, with excellent progression opportunities beyond that.

Duties and Responsibilities:

Help set design requirements

Generates Type Design data as well as validation such as SSA's and ELA, EMI and FT test plans

Capable of development into CVE

Assist in developing EASA/FAA Certification Plans

Assemble required deliverables for the project

Coordinate data transfer and deliverables for the project

Interface with EASA/FAA/Client/Internal engineers/suppliers

Provide project guidance toward successful solution

Primary Point of Contact for all project correspondence

Responsible for project schedule, costs, scope and setting resource requirements

Responsible for work change requests

Responsible for maintaining an project Action Item Log
Responsible for weekly progress report and coordination call with Client
Responsible for weekly progress report and coordination call with Management
Administrative over site of resources assigned to the project
Support Sales/Contracts with pre-sales discussions as well as commercial and technical proposals and project plans
Support Finance with revisions to planned costs or billing milestones
Project Management training and development

If this role sounds of interest and you've got the potential to become a CVE, please apply as soon as possible to avoid disappointment!

Radio Systems Engineer

St. Neots, Cambridgeshire

Competitive Salary Depending On Experience

Full Time

About us

Established in 1972, Radio Links Communications became the first independent radio company in the UK.

After obtaining the First Licence in the UK allowing the hire of radio equipment, they have secured orders from councils, organisers of sporting events and local businesses, a number of which are still customers today. The popularity of the hire market expanded UK wide and using the wealth of knowledge gained, the company rapidly evolved into system sales. During this period Radio Links became Authorised Radio Dealers for all major radio manufacturers.

Radio Links continues to work to the Quality Management standard BS/EN/ISO 9002 and all products supplied are supported from our Service Department which runs a modern, fully equipped workshop.

Radio Links Communications Ltd are holders of the Royal Warrant since 2013.

Radio Systems Engineer – About the role

Featured Courses

Citrix Training Package - (with Desktop, Server & App) Online

(http://www.fish4.co.uk/advice/training/courses/?tc_courseid=1)

Web Design

We are authorised dealers for Motorola and Hytera Two way radios and communication systems and we are looking for an experienced Radio Engineer to join our Technical Sales team in the design, set-up and commissioning of two-way radio systems for a wide range of UK businesses.

You will be based within our busy Sales Technical Workshop and ideal candidates must have

- The ability to apply the latest digital/fibre optic technology to customer's bespoke requirements
- Technical expertise of data transfer over IT networks
- A comprehensive understanding of IP based solutions
- Knowledge of antenna systems and the ability to install fixed hardware and repair/service PMR equipment is required
- A valid UK driving licence
- Be prepared to travel throughout the UK
- Be willing to work flexible hours when necessary

For further details please visit the Radio Link website and look at our vacancies section.

Please apply by CV and covering letter

Closes	25 Nov 2016
Ref	TTAS/OX/Linux
Sectors	Education & Teaching, Engineering, IT, Networks & Systems
Contract Type	Permanent
Hours	Full Time

World renowned prestigious University currently looking to recruit **LINUX Systems Engineer** for its Engineering Science Division.

Role will be based in **Oxford**.

The role

The University's IT Team provides a wide range of computing and network support, delivering and supporting IT equipment, specialist software, services and networking supporting in support of the teaching and research activities of the Department.

As Systems Engineer you will be responsible for providing excellent IT infrastructure services, including data storage, remote access and other focused services in response to academic need. The **role has a heavy Linux systems bias** (although work with some Windows systems will be required, with training available as needed), and as well as calling upon a sound technical background you regularly need to exercise excellent analysis and problem solving skills.

You will be primarily providing support to staff, researchers and students and there may be an occasional requirement to provide support to one or more of our satellite sites.

Responsibilities

Systems Administration (with a focus on Linux systems)

Featured Courses

Designing Business Intelligence Solutions with Microsoft SQL Server 2012 (Microsoft 70-467 Course)
Online

(http://www.fish4.co.uk/advice/training/courses/?tc_courseid={

Official Sage 50

- Act as the primary systems administrator.
- Working closely with local colleagues, and in consultation with Engineering IT Infrastructure staff, design, build, manage and maintain IT services in support of the needs of staff and students.
- As technical lead proactively explore opportunities to develop and improve IT infrastructure
- Design and implement appropriate business continuity and disaster recovery solutions to protect services and data
- Liaise with IT staff and central University on issues relating to data centre management, network management and telecoms
- Contribute to and participate in IT projects which deliver improvements to IT services within the Department
- Liaise with Engineering IT staff at other University sites to help cover for sickness and holiday.

The Person

- **Demonstrable skills with Linux systems administration,** including storage and remote access management
- Excellent troubleshooting skills
- Strong team working skills with good self-motivation and the ability to work autonomously
- Good organisational and time management skills

- Good interpersonal skills with the ability to communicate effectively with all levels of users, suppliers and technical staff in a patient and helpful manner
- Good written communication skills; ability to document user guides, write procedures, reports etc.
- Ideally educated to degree level in a relevant subject (or with equivalent experience)

Desirable

- Experience with virtualisation (VMWare or Hyper-V)
- Experience with Windows server environments
- Experience in higher education, or in a research environment
- Experience in a previous as a member of a team with a customer service focus

In return for your Linux skills you will receive a base salary from £30,700 to £37,700 pa (dep on exp) + an EXCELLENT range of University employee benefits ranging from: First Class Training & Development, Pension, Health Care, Child care/Child voucher schemes, great Sports facilities.

Interested? If yes please send your CV + cover letter in Word format to Tony Timmins, Executive Search Consultant.

Systems Engineer / Platform Implementation Consultant at CHILLIFROG LTD Birmingham, MID

About the Job

Systems Engineer / Platform Implementation Consultant (HW/SW/OS, Network, Cloud, Virtualisation) sought by exciting established, award winning PLC software development and services company providing enterprise level back-end IT systems. Salary £35K-£45K depending on experience level and skill set plus fantastic corporate benefits package!

LOCATION; Office based south of Birmingham (between Birmingham and the M42/M40 Junction), West Midlands

THE COMPANY;

My client is an established, steadily growing, award winning software development company and part of a larger PLC software and services company providing enterprise level back-end IT / supply-chain systems. They nurture long-term partnerships with businesses that seek to continually improve their performance, through the intelligent use of technology, people and improved business processes. They have a successful record of installing over 500 enterprise solutions in a variety of industry sectors and business sizes.

THE ROLE;

Due to ongoing expansion my client seeks to recruit a new talented and ambitious Systems Implementation Engineer who is looking for their next career move that may ultimately lead to a more senior team leading and platform strategy design and planning in the medium-term. You will be responsible for specifying the platform infrastructure for new customers and providing existing customers with solutions to enhance their existing implementations.

- You will take a hands-on approach to delivering and supervising packaged platform support services
- You will manage the general transition from on-premise solutions to hosted and cloud-delivered implementations.
- Under the direction of the Technical Director, work with and manage the platform specifications and performance of the Company's hosting and cloud platform offerings.

[Back to job search results](#)
[Apply](#)
[Save](#) [Email](#)

- You will manage and support the Company's internal application infrastructure.
- Develop and maintain a detailed understanding of the on-premise and hosted platform requirements of the Company's software development stack
- Work alongside customer facing staff to advise and implement hardware, infrastructure, platform and security requirements.
- Provide specialised level 3 support to the help desk team on hardware, platform and security issues.
- Understand and advise on the hardware devices deployed as part of the Company's software and manage the specification, configuration and integration of these components as part of the overall solution.
- Supporting the development team with the design and provision of appropriate test environments.
- Maintain and enhance the Company's platform and infrastructure documentation including licence compliance.

- CANDIDATE PROFILE;
- Experience supporting the platform requirements and IT infrastructure of businesses using enterprise software solutions
- hands-on experience of supporting and deploying Linux and Windows server platforms on Dell hardware.
- Ideally MCSE certified / Linux LPI or similar certification
- Deep experience of enterprise virtualisation software such as VMware and configuring virtual resources.
- Practical experience of public and private cloud infrastructure such as AWS.
- Clear understanding of internet technologies, including DNS management, web servers and security technologies.
- Proven network management skills including TCP/IP, switching routing, VLANs etc
- The ability to create and manage high quality documentation.

WHAT'S ON OFFER;

- An ideal position for an experienced and passionate systems engineer candidate who seeking a role where there is a REAL opportunity for career progression and increased responsibility.
- A competitive financial remuneration package with comprehensive corporate benefits package.
- An opportunity to work in a highly reputable software company part of highly successful software and services group offering excellent job security, an extremely high staff retention ratio and a continuing professional development plan for all staff.

If you are a good match to the above criteria then please apply with a CV at your earliest opportunity so as to be considered for this excellent life-changing opportunity.

KEYWORDS; Systems Engineer, Platform Implementation Consultant, Technical, DevOps, Systems Administrator, MCSE, Unix, Windows, software, manager, senior, support, MCP, hardware, Dell, 3rd line support, 2nd line support, Infrastructure

- CompTIA Linux+ Powered by LPI.
- Linux Professional Institute (LPI) Certifications.
- Linux Foundation LCFS And LCFE Certs.

EDS System Design Engineer at HEAD RECRUITMENT LTD Sheffield, Yorkshire S9 1EP

About the Job

EDS System Design Engineer

Yorkshire, UK

Automotive systems

£Negotiable plus benefits

My client, based in the heart of Yorkshire within commutable distance to some of the most beautiful rural areas of the country, are a recognised leader in the design and manufacture of advanced Automotive powertrain drive systems and a valued 1st tier supplier to global automotive car manufacturers, major off highway vehicle, bus and truck manufacturers throughout the UK and Europe.

As one of the world's leading designers and manufacturers of these products this well established company now have a requirement for an EDS System Design Engineer to join their R&D Engineering team working predominately on NPI (New Product Introduction) projects.

The successful applicant will be responsible for.

- The design & development of the powertrain to vehicle Electrical Distribution Systems (EDS) to customer specifications.
- The production of Design and Development specifications / drawings to support product realisation.
- Support, investigate and resolve DVP & R (Design Verification Plan and Report) related EDS system issues.
- Support prototype build with information and recommendations.
- Formally reviewing and controlling design changes during product lifecycle.

[Back to job search results](#)
[Apply](#)
[★ Save](#) [✉ Email](#)

- The delivery of cost and weight efficient design for allocated EDS systems.
- The generation of product models and completing detailed technical drawings using 3D CAD system.

Applications are invited from EDS Design Engineers with knowledge and/or experience of Electrical Harness engineering systems.

In return my client will offer a very competitive and negotiable salary, pension, life assurance, a thorough training and development programme plus excellent prospects for advancement within this leading, successful, and well established organisation.

If you feel you have the necessary skills, experience and drive please email your CV to stewart@head-recruitment.co.uk

Electus has been introducing leading technical and engineering organisations to highly skilled candidates in the Aerospace, Defence, Energy & Infrastructure sectors since 2003. Quality and service are at the core of our business and we are members of the Association of Professional Staffing Companies. Electus has also been ISO9001 accredited since 2004. Each and every candidate and client is vitally important to our success and we do our utmost to ensure they have a great experience with us.

We use the best technology & search techniques to leverage the physical and digital spaces to give us a global talent pool. Utilising our superior sector knowledge, we have tailored our services to provide pinpoint support throughout the hiring process. Our teams of industry qualified experts possess deep understanding of the sectors in which we specialise developing niche networks of highly skilled individuals.

Systems / System Integration Engineer**Apply now** 

You can make an immediate impact on current programmes of work. Your experience working on complex systems/ programmes would prove a valuable asset to my corporate client in the Defence industry. Your knowledge of requirements management or systems integration, test and delivery will help you to make a significant contribution to work on C4I systems.

You will have the opportunity to work alongside leading thinkers in the industry at a company renowned for cutting edge technologies and innovative solutions. A corporate benefits package and transparent career development opportunities are on offer within this vibrant Engineering environment.

Read on for specifics on the job. To apply click the Apply Now button at the bottom of the page.

About the job

The client requires a System Integration Engineer on a contract basis to make a significant contribution to the integration, test and delivery of C4I Systems through the application of systems engineering principles. This job includes:

Configuring a suite of communications and infrastructure equipment in accordance with a system architecture document.

Producing Requirements for Test suitable to exercise the integration of applications onto an infrastructure.

Performing a number of trials and tests.

Documenting all activities in manner suitable to enhance the understanding of both technical and non-technical audiences.

Analyse the design of the systems under test.

Develop and document requirements for system integration and testing activities on C4I programmes.

Provide representation of the systems under test through Unified modelling language (UML).

Define test requirements, specifications and scripts under the supervision of a Systems Senior Engineer.

About you:

To be suitable for the System Integration Engineer role you will need a degree or equivalent in a relevant subject as well as significant, technical competence in integration and testing of complex software based systems. You will need technical experience in the application of the systems engineering process in a Defence design and development environment as well as an understanding of communications: such as the ability to orient a problem under investigation against the Internet and OSI Reference Models, and good understanding of TCP/IP protocol suite and basic routing technologies. You will also need proven, methodical, fault finding skills and an ability to generate well-structured technical documents.

Apply through the link ASAP! These roles will not be available long.

Cloud System Engineer - Sheffield at Saxon Recruitment Solutions Ltd

Sheffield, Yorkshire S141WY

About the Job

Cloud System Engineer - Sheffield.

Commutable from Sheffield, Rotherham, Barnsley, Doncaster, Worksop, Chesterfield.

Cloud System Engineer, AWS, GIT, Rest API, integration, SQLite, MySQL, RDBMS. OOP.

This leading Designer and Manufacturer of Quality Electronic Security and Building Automation products are seeking an experienced Cloud System Engineer with experience in designing, building and deploying highly scalable cloud-based solutions.

The Cloud System Engineer is required for a superb, unrivalled role at new state-of-the-art R&D offices in Sheffield, to form part of a highly successful market-leading electronics engineering team.

With a culture of innovation and utilising world-leading electronics manufacturing, the company continues to expand its award-winning range in Security products and Building/Home Automation Apps.

Having celebrated their 30th year anniversary and now part of a multi-billion-dollar group of companies, they continues to grow and develop as it looks to assert itself as the number one manufacturer of Security equipment. Resultant of this, they are looking to find skilled, determined and committed individuals who will help mould and drive a highly successful team.

The Cloud System Engineer will need to demonstrate the following skills and expertise :

- * Demonstrable cloud experience, particularly with previous experience working with AWS, GIT, Rest API, custom API development and continuous integration.
- * A strong understanding and experience with different operating systems.
- * A strong knowledge and experience of SQLite, MySQL, or similar database management systems/RDBMS.
- * Previous experience in debugging and optimisation.

Candidates should be conversant with Security principles, have some experience in App & Server Application Development and Object Oriented Programming (OOP).

[Back to job search results](#)

[Apply](#)

[★ Save](#) [✉ Email](#)

The Cloud System Engineer will undertake the following duties :

- * Acting as the lead cloud system engineer, responsible for the design, architecture and development of the system and the interfaces.
- * Gathering requirements around functionality and translating into elegant functional solutions
- * Defining the device communication protocols among different stakeholders in the project.
- * Defining and managing the requirements with meticulous planning, meeting the targets on time and within budget.
- * Solving technical, managerial, and operational problems and evaluating options based on the relevant information, resources, well rounded experience and knowledge.

This is an outstanding opportunity for a Cloud Systems Engineer to join a thriving business as it enters an exciting period.

Excellent opportunities in an expanding, stable, well established and highly innovative organisation. Working with a wide variety of interesting technologies, you will be given the freedom and flexibility to develop products in a very friendly, informal work environment. The company has a great culture, new R&D offices, with a commitment to continuous training & development, supported by excellent staff retention.

System Safety Engineer (Stevenage)

About the Job

The opportunity

An opportunity has arisen for an engineer to exploit their system and safety engineering skills to influence the safety aspects of technically complex and challenging products. While exploring the boundaries of best practice, this will involve optimising the effort devoted to safety assurance, with the goal of balancing safety against the inherently lethal attributes required of weapon systems.

The Role

- In this role you will need to balance time and cost constraints to ensure that a safety case, comprising appropriate evidence, is constructed.
- To do this, you will need to understand the system and its operating context, so that you can decide what type of evidence will most cost-effectively mitigate them to the customer's satisfaction.
- This will involve exploiting a range of techniques and approaches.

What's in it for you?

- Alongside core engineering projects you will also have the opportunity to conduct internally funded research packages.
- A variety in project work that will enable you to apply the breadth of your system safety engineering skillset and experience and develop a deep understanding of the technologies involved.
- You will also have the opportunity to work internationally.
- MBDA also offers a comprehensive learning and development programme to enable the development of skills that support both technical delivery and broader professional development.

What's great about the team?

- You will be joining a team with a strong pedigree in the delivery of safety engineering, in a company with an excellent safety culture.
- You will have the opportunity to share in that experience and contribute to our learning as we continue to develop our approaches and techniques.
- You will be able to influence systems as they develop from concept to delivery and gain first-hand experience of working with military customers.

What are we looking for?

- Demonstrable knowledge of, and experience in, the application of UK and International system engineering processes, particularly in safety-related systems, and safety assessment processes.
- Thorough understanding and experience of how the hazard analysis process integrates with the system engineering process to influence the design.
- Ability to deliver supporting information (Safety Case Reports, Hazard Analysis, Functional Failure Analysis, FTA, etc).
- Good verbal and written communications.
- Analytical and problem solving skills.
- Track record as an effective team player with strong interpersonal and influencing skills.
- Ability to work as part of a multi-disciplinary / multi-national team.
- Detail engineering experience (design, software, manufacture, etc.) is desirable.

What you would get

- Competitive salaries, flexible working, paid overtime (subject to level), a comprehensive pension scheme, sporting activities, fantastic site facilities, bonus schemes (subject to level), and superb learning and development opportunities.

Please note that in order to apply for MBDA UK opportunities you will need to be eligible for SC (Secret Level) UK Security Clearance.

Are you a member of LinkedIn? If so, you are invited to join our LinkedIn Group to view future MBDA UK opportunities and news. LinkedIn Group name: Engineering UK (Defence)

System Engineer - ADAS 30195 - Up to £28.10 Ltd

About the Job

Are you a **Systems Engineer**? Are you wanting to work with a Global OEM vehicle manufacturer? This role for a **Systems Engineer** is based within the Advanced Driver Assistance Systems team in Electrical Engineering. The ADAS Team develops and delivers driver assistance systems and features based on video, radar and ultrasonic technologies such as Lane Departure Warning, Lane Keeping Assist, Automatic High Beam control, Intelligent Emergency Braking, Traffic Sign Recognition, Intelligent Speed Limiter, Rear View, Junction View, Cross Traffic Alert, 360 degree Plan View, Lane Change Merge Aid, Park Assist. The **Systems Engineer** position will be within a team coordinated by a Lead System Engineer and will own / contribute to the following engineering tasks and deliverables. System and functional requirements. System and functional verification methods. Functional allocation. Contribution to the feature definition. System Boundary Diagrams. System Design FMEA. Diagnostic requirements. Functional Safety Analysis according to ISO26262. Control algorithms design, modelling and simulation. Competitors benchmarking. Technical reviews with Tier1 and Tier2 suppliers. Vehicle/system design validation and test reports. Issue identification, investigation and resolution

Systems Engineer Skills Required:

- Experience in Automotive Engineering and, specifically, experience in Driver Assistance Systems or comparable complex / safety relevant systems
- Experience with tools such as Doors, MatLab/Simulink, CANalyser, sysML
- Understanding of Quality methods, Failure Mode Avoidance and robustness

Systems Engineer Experience Required / Preferred:

- Knowledge of software engineering principles including model based development
- Experience of virtual test, component test and vehicle testing including proving ground environments
- Experience of component and system level issue investigations including appropriate problem solving and reporting tools (Six Sigma, 5D, Is / Is Not, Fault Tree etc.)
- Experience of automotive networking, diagnostics and fault handling techniques, and related system development tools (CANalyzer, ASL, CANape, etc.)
- Experience working with or managing offshore software development teams and / or 3rd party ECU suppliers for software coding and integration tasks
- Degree in Electronics, Software, Automotive / Aerospace engineering or similar subject, or equivalent industry experience
- Experience of ADAS feature development and delivery through all stages of the engineering development `V cycle Requirements and change management tools and processes, software version control, control strategy documentation
- Strong organisational, project management and communication skills essential
- Knowledge of MS Office Applications (Word, Excel, PowerPoint, Project)
- Full UK driving license
- Must be eligible to work within the UK without sponsorship

Primarily located at Gaydon - occasional travel to other sites may be required including overseas

Applicants *MUST* have proof of immediate and valid eligibility to work full time in the UK.

If interested in the role of **Systems Engineer** then please contact **Karla Harris-Hignett** at **Jonathan Lee Recruitment** on either **01384 446136** (DL) **07788 677359** (Mob) – or send an up-to-date **WORD** CV to **karla.harris-hignett@jonlee.co.uk** all correspondence and conversations for the role will be treated in the strictest of confidence.

Your CV will be forwarded to Jonathan Lee Recruitment, a leading engineering and manufacturing recruitment consultancy established in 1978. The services advertised by Jonathan Lee Contracts are those of an Employment Business.

Energize Recruitment Solutions Ltd

System Engineer - Linux, Automation, Scripting, Networking

About the Job

System Engineer - Linux, Automation, Scripting, Networking, System Administration, Cisco, Juniper, Infrastructure, Cloud

Role Description

As part of the system engineering team you will be responsible for the reliability, scaling and automation of the companies' infrastructure.

Essential Functions

- *Be part of a collaborative and friendly team
- *Scale and support infrastructure and services located in data centres around the world
- *Create tooling and automation to continuously improve our identification and resolution of Production events
- *Evangelise collaboration and best practice for systems reliability and security
- *Perform incident analysis and recommend remediation steps
- *Drive issue resolution with other Engineering and Technical Support teams
- *Participate in a flexible on-call rotation with other Engineers

Your profile

- *You have built Linux systems and have a strong knowledge of Linux internals
- *You're experienced with configuring networking devices and trouble-shooting networks
- *You're proficient with one or more scripting or programming languages. You are not expected to be a software developer, but to be "automation-first"
- *You're familiar or interested in monitoring tools and time-series databases, such as Graphite, InfluxDB and Riemann
- *You have experience with core operations systems such as DNS, LDAP and NTP
- *You understand virtualisation technologies like Linux KVM or VMWare
- *You're familiar with mission-critical databases, particularly MySQL and Redis
- *You understand configuration management concepts and systems, such as Puppet, Chef or Ansible

Nice to have, but not essential

- *Understanding of OpenStack and related IaaS/cloud computing technologies
- *Familiarity with modern deployment tools like Jenkins, Git and Docker
- *Knowledge of routing protocols such as BGP and OSPF
- *Linux certifications such as LPIC or RedHat RHCSA/RHCE are an advantage
- *Juniper or Cisco networking certifications are a plus
- *BSc in Computer Science or equivalent professional experience

PLEASE NOTE: My client is open to consider graduate/junior level profiles with the appropriate degree, alongside more senior engineers with good commercial experience in a similar role.

System Engineer - Linux, Automation, Scripting, Networking, System Administration, Cisco, Juniper, Infrastructure, Cloud

About Us

HFG was established in 2002 and has since grown organically to become a leading recruitment business in our sector – Insurance. We are passionate about the Insurance industry and the role we play, recognising and embracing the unique aspects of each segment; Life Insurance, General Insurance, Re-Insurance, Broking and the Lloyd's market.

Built on a solid base of high staff retention, a cohesive culture and a first class training programme the company now employs a strong mix of trained recruiters and ex-industry professionals. Working within the UK, Bermuda and Asia Pacific our client relationships and interaction are driven by our industry expertise and knowledge. Combined with an honest and direct communication style we are able to share information and provide value to our customers through our consultative approach. We position ourselves to be highly visible within the industry and are considered to be a 'thought leader' on recruitment and staffing issues.

Customer service and quality are at the core of everything we do, and we take pride in the work we have delivered to the Insurance industry to date.

Systems Engineers

About the Job

Systems Engineers :

Due to a substantial increase in workload a World Class Defence Organisation based in Stevenage, Hertfordshire is currently looking to recruit 3x Systems Engineers who could come from a variety of different backgrounds; Systems Design Engineers / Systems Architects / Integration & Validation Engineers etc.
Please Note: you must be eligible for SC (Secret Level) Security Clearance.

The contract is initially for 6 months (ongoing and long-term thereafter).

Department offering hourly rates of £44.40 per hour.

Systems Engineer Description:

Systems Engineers with strong knowledge of several of the following System Design related tools and experience are of interest:

: Electronics Integration and Proving skills
: DOORS
: SysML
: UML
: MATLAB
: Simulink
: Rhapsody
: Aristisan
: Excel
: Requirements flow down and analysis
: Interface Documentation

Academic Qualification:

Ideal - BSc/MSc/MEng in systems engineering, electrical engineering, physics, or equivalent.

Experience Requirements:

Candidates from the defence, aerospace industry are ideal however other industries will be considered so long as you possess the necessary Systems Engineering skills and experience.

An ideal area of your previous work could come from the following domains;

Missile/Weapon Systems
Systems Combat
Command & Control Systems

In addition the successful candidate will.....

- have the ability to visualize and analyse complex systems
- have good analysis skills
- have good verbal, presentation and written communication skills
- have practical knowledge of basic systems engineering principles and processes.
- be able to work with engineering teams, including in-house and contractor personnel
- be pro-active and be capable of working on their own initiative with a minimum of supervision
- have good working experience in more than one phase of the engineering life cycle, with sufficient experience of the total life cycle to ensure a good understanding of adjacent phases and through-life engineering issues

Job description

The focal point for the relevant equipment owners, suppliers and the customer for all system related activities.

Responsible for both their own work and their direct reports. Their work involves frequent customer one-one contact, either in person or remotely (by phone/e-mail/WebEx), where agreements are reached to company work and product design content. The job holder has responsibility for prioritising work tasks, planning and cost control, working within a flexible engineering environment this role will become part of a team of highly motivated, skilled and experienced individuals whose primary activities include:

- System requirement definition, working with the customer in a team context
- System design including architectures, performance analysis and integration aspects
- Requirement management and compliance analysis
- Participation in system test rig design, test rig commissioning and system testing
- Support of system testing at the customer's facility
- Preparation of documentation with the end goal of system qualification and aircraft certification (including system specifications, interface control documents, system description documents, test specifications and reports)
- Supporting new business growth in promoting the company's capability to customers, in investigating possible opportunities and in preparation of responses to customer Requests for Proposal
- Produce plan/schedule for work package and allocate resources.
- Provide concise and robust systems requirements database to customer and equipment owners.
- Technical decisions concerning AC & DC subsystem.

Candidate skills & requirements

- A good first degree in Electrical, Electronic, Aeronautical, Systems or Control Engineering or other appropriate professional qualification
- Knowledge of ARP4754 Rev A is preferable but not essential
- Good understanding of the System Engineering process and its application to the product lifecycle
- Experience of understanding and interpreting customer and internal specifications to extract technical requirements, building strong relationships with external and internal customers
- System architecture decomposition and definition, Integration V&V planning, System requirement definition, Validation, Implementation, System verification etc
- An understanding of Health and Safety considerations relevant to electrical systems and rotating equipment
- Learning ability and desire to be at the forefront of engineering innovation
- Self-motivation and ability to work with little supervision
- Good analytical skills and motivation by problem solving
- A strong interest in systems integration, and its application to electrical power generation and distribution and to motor drives
- Good team-oriented interpersonal skills
- Good written and verbal communication
- Job holder must have the ability to make decisions
